

## Climate risk insight at scale, across multiple businesses.

Organisation-wide deployment of integrated physical and transition risk analysis across entities, portfolios and reporting cycles.

### Why Expert is Needed

Many organisations operate across multiple businesses or client groups.

As climate risk becomes embedded in governance, capital planning and insurance strategy, insight must be consistent and repeatable across entities or engagements. Isolated assessments do not support sustained oversight.

When boards, investors, clients or regulators expect structured governance, organisations need continuity: comparable outputs and consolidated accountability.

Expert provides enterprise-scale capability for consistent oversight.

It draws on RedLines' integrated physical and transition risk framework.

### What Expert Enables

- Multi-entity or multi-portfolio oversight
- Consistent methodology across businesses or client engagements
- Consolidated reporting aligned to governance structures
- Ongoing deployment across reporting cycles

# What Expert Is Designed to Do

RedLines Expert is an enterprise deployment model designed to embed climate risk capability across organisations with multiple entities or client groups.

It provides structured, repeatable analysis and consolidated reporting across businesses, portfolios or engagements, integrating physical and transition risk signals at scale.

Expert supports governance, oversight and strategic planning across the organisation or portfolio. It does not replace capital modelling or adaptation design, which remain informed by Pro-level analysis.

## How Expert Fits

### Scan

Baseline exposure  
visibility

### Pro

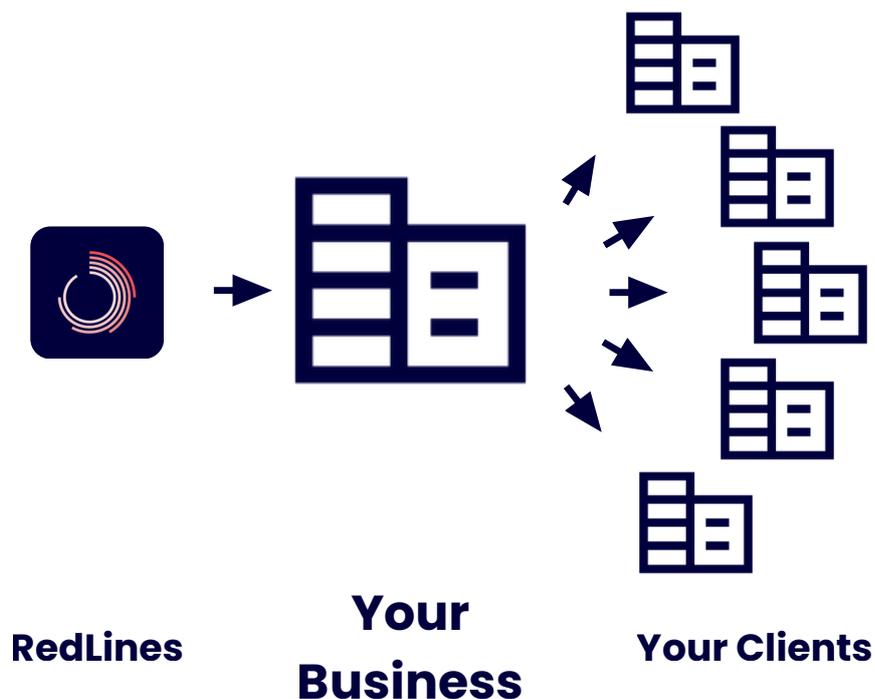

Quantified, decision-  
grade insight

### Expert

Scaled, multi-entity  
capability
